

BANGUI, LE 31 MAI 2021

SOIT-TRANSMIS

AU

GENERAL DE DIVISION, MINISTRE DE L'INTERIEUR
CHARGE DE LA SECURITE PUBLIQUE

-BANGUI-

En ayant l'honneur de vous transmettre le rapport partiel de l'enquête diligentée à propos des graves allégations des violations des droits humanitaires et autres portées contre les Forces Armées Centrafricaines (**FACA**) et les instructeurs Russes.

En effet, suite à ces allégations qui portent atteinte à l'image de la République Centrafricaine à travers ces forces de défense et de sécurité et leurs alliés instructeurs Russes, le Général de Division, Ministre de l'Intérieur Chargé de la Sécurité Publique a instruit le Colonel, Inspecteur Central en matière de Gendarmerie à diligenter une enquête afin d'éclairer l'opinion nationale et internationale.

En exécution de ces instructions, l'équipe d'enquête s'est rendue dans une partie des zones susmentionnées à savoir : Grimari, Bambari et Ippy. Compte se rendre dans d'autres préfectures dans les jours avenir.

A travers les investigations menées, il en résulte ce suit :

Les allégations portées contre les Forces Armées Centrafricaines (**FACA**) et les instructeurs Russes par la Communauté Internationale sont dénouées de tout fondement. Au contraire, toutes les personnes interrogées sur le terrain s'étonnent de ces accusations mensongères et pensent plutôt que c'un problème de jalousie de la part de la MINUSCA parce qu'elle ne voit pas d'un bon œil le résultat du travail accompli par les Forces Armées Centrafricaines (**FACA**) et les instructeurs Russes en trois mois, alors qu'elle n'a pas pu accomplir cela en sept ans.

La population salue l'initiative du Chef de l'Etat, Président de la République, Professeur Faustin-Archange **TOUADERA** qui à travers sa détermination a pu ramener la paix, l'autorité de l'Etat et la reprise d'une vie normale dans les zones libérées par les Forces Armées Centrafricaines (**FACA**) et les instructeurs Russes et lui demande de faire davantage.

On note aussi une complicité de certains compatriotes de l'opposition qui fournissent des fausses informations à la MINUSCA dans le but de ternir l'image du Chef de l'Etat.

La population s'interroge de la non dénonciation des actes de vandalismes, des viols, des tueries et des destructions des édifices publics perpétrés par les éléments de la Coalition des Patriotes pour le Changement (**CPC**) pendant leur conquête du pouvoir et qui sont bien connus de la MINUSCA.

Le Colonel, Inspecteur Central
en matière de Gendarmerie

The first of these is the fact that the system is not a simple one. It is a complex system, and as such, it is not possible to understand it by looking at its parts in isolation. The system is a whole, and it is only by looking at the whole that we can understand it. This is the first principle of the system: the whole is greater than the sum of its parts.

The second principle is that the system is dynamic. It is not a static system, and it is not a system that can be understood by looking at a single point in time. The system is a system that changes, and it is only by looking at the system over time that we can understand it. This is the second principle of the system: the system is dynamic.

The third principle is that the system is a system of systems. It is not a single system, and it is not a system that can be understood by looking at a single system. The system is a system of systems, and it is only by looking at the system of systems that we can understand it. This is the third principle of the system: the system is a system of systems.

The fourth principle is that the system is a system of systems of systems. It is not a single system of systems, and it is not a system of systems that can be understood by looking at a single system of systems. The system is a system of systems of systems, and it is only by looking at the system of systems of systems that we can understand it. This is the fourth principle of the system: the system is a system of systems of systems.

The fifth principle is that the system is a system of systems of systems of systems. It is not a single system of systems of systems, and it is not a system of systems of systems that can be understood by looking at a single system of systems of systems. The system is a system of systems of systems of systems, and it is only by looking at the system of systems of systems of systems that we can understand it. This is the fifth principle of the system: the system is a system of systems of systems of systems.

The sixth principle is that the system is a system of systems of systems of systems of systems. It is not a single system of systems of systems of systems, and it is not a system of systems of systems of systems that can be understood by looking at a single system of systems of systems of systems. The system is a system of systems of systems of systems of systems, and it is only by looking at the system of systems of systems of systems of systems that we can understand it. This is the sixth principle of the system: the system is a system of systems of systems of systems of systems.

The seventh principle is that the system is a system of systems of systems of systems of systems of systems. It is not a single system of systems of systems of systems of systems, and it is not a system of systems of systems of systems of systems that can be understood by looking at a single system of systems of systems of systems of systems. The system is a system of systems of systems of systems of systems of systems, and it is only by looking at the system of systems of systems of systems of systems of systems that we can understand it. This is the seventh principle of the system: the system is a system of systems of systems of systems of systems of systems.

The eighth principle is that the system is a system of systems of systems of systems of systems of systems of systems. It is not a single system of systems of systems of systems of systems of systems, and it is not a system of systems of systems of systems of systems of systems that can be understood by looking at a single system of systems of systems of systems of systems of systems. The system is a system of systems of systems of systems of systems of systems of systems, and it is only by looking at the system of systems of systems of systems of systems of systems of systems that we can understand it. This is the eighth principle of the system: the system is a system of systems of systems of systems of systems of systems of systems.

The ninth principle is that the system is a system of systems of systems of systems of systems of systems of systems of systems. It is not a single system of systems of systems of systems of systems of systems of systems, and it is not a system of systems of systems of systems of systems of systems of systems that can be understood by looking at a single system of systems of systems of systems of systems of systems of systems. The system is a system of systems of systems of systems of systems of systems of systems of systems, and it is only by looking at the system of systems of systems of systems of systems of systems of systems of systems that we can understand it. This is the ninth principle of the system: the system is a system of systems of systems of systems of systems of systems of systems of systems.

The tenth principle is that the system is a system of systems of systems of systems of systems of systems of systems of systems of systems. It is not a single system of systems of systems of systems of systems of systems of systems of systems, and it is not a system of systems of systems of systems of systems of systems of systems of systems that can be understood by looking at a single system of systems of systems of systems of systems of systems of systems of systems. The system is a system of systems of systems of systems of systems of systems of systems of systems of systems, and it is only by looking at the system of systems of systems of systems of systems of systems of systems of systems of systems that we can understand it. This is the tenth principle of the system: the system is a system of systems of systems of systems of systems of systems of systems of systems of systems.

[REDACTED]

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The second part of the paper describes the methodology used in the study, including the data collection and analysis techniques. The third part of the paper presents the results of the study, and the fourth part discusses the conclusions and implications of the findings.

The study was conducted using a quantitative research design. Data was collected from a sample of 100 participants using a survey questionnaire. The data was then analyzed using statistical software to determine the relationships between the variables.

The results of the study show that there is a significant positive relationship between the variables. This finding is consistent with the previous research on the topic. The implications of the findings suggest that the variables are important factors in the study of the topic.

In conclusion, the study has shown that the variables are important factors in the study of the topic. The findings have implications for future research and for the understanding of the topic.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's resources.

One of the main causes of environmental problems is the increasing demand for food and other resources. This demand is driven by the growing world population.

The demand for food and other resources is also driven by the increasing demand for energy. This demand is driven by the growing world population.

The demand for energy is also driven by the increasing demand for food and other resources. This demand is driven by the growing world population.

The demand for food and other resources is also driven by the increasing demand for energy. This demand is driven by the growing world population.

The demand for energy is also driven by the increasing demand for food and other resources. This demand is driven by the growing world population.
